

LED.... Beyond the Basics

The newest in lights, components and how to use them .

All the basic items needed to light up your miniatures and your work area including a CD to refer to for years to come.		
3 volt power supply	9 Volt System	Battery holders
Lights	Lamp Kit	Ribbon Lighting
switches and plugs	Connectors	Extra Supplies

- Learn how to make a lamp for battery power or 12 volt transformers,
- Learn how to make soldered connections with live demonstrations
- Learn how to light up a craft and work area
- Learn how to test LED connections
- Learn how to use some of the components used in Incandescent lighting.
- Learn how to wire through a hinge

This class is easy, fun and very informative. One you will use for years and in all miniature applications. The recent Seattle, WA class raved about what they learned and are looking forward to the more advanced class. This is it...what are you waiting for??....Join us.

Don't miss this opportunity to master the new LED lighting!!!
